

ISAP 29th Annual Meeting

*Pharmacological Considerations
of ERAS Protocols*

Friday, October 2nd, 2020

Walter E. Washington Convention Center

801 Mount Vernon Place NW

Washington, DC 20001

6737 W. Washington St., Suite 4210 • Milwaukee, WI 53214

(p) 414-755-6296 • (f) 414-276-7704 • isaphq@isaponline.org

2020 | www.isaponline.org

29th Annual Meeting Agenda

7:30am – 8:00am **Breakfast and Registration**

8:00am – 10:00am **Interactive ISAP Workshop 2020**

Practical Concepts of Anesthetic Pharmacology for The Benefit of Your Patient. A practical course that will improve your skills for anesthetic drug administration.

This two-hour interactive workshop is intended for residents and consultants in anesthesia who would like to learn about methods of drug titration that can result in a more controlled condition of the patient, both during induction, maintenance and recovery of anesthesia. Two experienced workshop presenters Steve Shafer, MD, Stanford, USA, and Hugo Vereecke, MD, PhD, Groningen, The Netherlands, will share their knowledge and discuss basic concepts of anesthetic pharmacology that can be applied easily in clinical practice to the benefit of your patient.

The learning objective: To obtain skills for adapting drug titration towards available pharmacological evidence.

Workshop Concept: By interacting with the audience, practical problems that may occur in clinical practice will be shared and discussed. After this workshop the attendants will have learned the importance of concepts such as “time to peak effect” and “context sensitive half-time” and how to apply these in clinical practice. Technological solutions that assist in individualizing the drug titration during a balanced anesthesia will be discussed. The concept of “effect-site concentration” will be used and explained as an easy tool to understand the time course of drug effect related to different titration techniques.

Workshop presenters: Steve Shafer, MD, Stanford University, CA, USA & Hugo Vereecke, MD, PhD, University of Groningen, The Netherlands

10:30 am – 12:30 pm **Session 1 - Tailoring Your Anesthetic to Promote Enhanced Recovery**

10:30 am – 11:30 am **Depth of Anesthesia and Adverse Outcomes After Major Surgery**
Kate Leslie, MD, FANZCA

11:30 am – 12:30 pm **ERAS & Opioids: The Good, The Bad, & The Ugly**
Engy T. Said, MD & Rodney A. Gabriel, MD, MAS

12:30pm – 1:30 pm **Lunch, Business Meeting & Poster Session**

1:30pm – 3:30pm **Session 2 - Strategies to Avoid Post-Operative Delirium**

1:30 pm – 2:30 pm **Perioperative Strategies to Prevent Postoperative Delirium**
Lis Evered, MD

2:30pm-3:30pm **Best Practices in Prevention of Postoperative Delirium: Avoidance of Beers Criteria Medications**
Anne Donovan, MD

3:30pm-4:00pm **Moderated Poster Session**

4:00pm-4:45pm **Keynote Speaker & Lifetime Achievement Awardee
The Impact of Clinical Pharmacology on My Academic Career**
Tom Krejic, MD

Planning Committee

Jerry Ingrand, MD, MS
Associate Clinical Professor
Department of Anesthesiology
University of California, San Diego School of Medicine, La Jolla, CA, USA

Hugo E.M. Vereecke, MD, PhD
Assistant Professor, University Medical Center Groningen, University of Groningen, Groningen, The Netherlands
AZ Sint-Jan Brugge-Oostende AV, Brugge, Belgium

Speakers

Anne Donovan, MD
Associate Clinical Professor
Department of Anesthesia and Perioperative Care, Division of Critical Care Medicine
University of California, San Francisco, CA, USA

Lis Evered
Visiting Associate Professor of Neuroscience
Research in Anesthesiology, Department of Anesthesiology
Visiting Assistant Professor of Neuroscience in Anesthesiology, Feil Family Brain and Mind Research Institute
Weill Cornell Medicine, New York, USA
St. Vincent's Hospital, Melbourne, Australia
University of Melbourne, Australia

Rodney A. Gabriel, MD, MAS
Associate Professor of Anesthesiology
Associate Adjunct Professor of Biomedical Informatics
Chief, Division of Regional Anesthesia and Acute Pain Medicine
Medical Director, Koman Outpatient Pavilion
University of California, San Diego, CA, USA

Tom C. Krejcie, MD
Professor of Anesthesiology and Associate Chief Medical Officer
Northwestern University Feinberg School of Medicine and Northwestern Medicine, Chicago, IL, USA

Kate Leslie MD FANZCA
Professor, Department of Anaesthesia and Pain Management
Royal Melbourne Hospital, Melbourne, Australia

Engy T. Said, MD
Associate Clinical Professor & Clinical Director, Acute Pain Service
Department of Anesthesiology, Division of Regional Anesthesia and Acute Pain
University of California, San Diego, CA, USA

Steve Shafer, MD
Professor of Anesthesiology, Perioperative and Pain Medicine
Stanford University Medical Center, Stanford, CA, USA

Hugo E.M. Vereecke, MD, PhD
Assistant Professor, University Medical Center Groningen, University of Groningen, Groningen, The Netherlands
AZ Sint-Jan Brugge-Oostende AV, Brugge, Belgium

Participant Notification

We acknowledge the potential presence of limitations on information, including, but not limited to: data that represents ongoing research; interim analysis; preliminary data; unsupported opinion; or approaches to care that, while supported by some research studies, do not represent the only opinion or approach to care supported by research.

Save the Date

**ISAP 30th Annual Meeting
October 8, 2021 • San Diego, CA**

**Walter E. Washington
Convention Center**
801 Mount Vernon Place NW
Washington, DC 20001

International Society for Anaesthetic Pharmacology
6737 W Washington St
Suite 4210
Milwaukee, WI 53214

Registration Information Enclosed

29th Annual Meeting Friday, October 2nd, 2020 • Washington, D.C.

Workshop Target Audience: This program is designed for an international audience of general anesthesiologists, residents in anesthesia and specialty physicians who want to learn about practical applicable pharmacological knowledge for an improved predictability of anesthetic effect.

Objectives of the Workshop: After attending this interactive workshop you should be able to:

1. Describe the basic pharmacological concepts that every anesthesiologist should know to improve his/her drug titration skills both for single drug administration as for balanced anesthesia using multiple intravenous drugs and/or volatile agents.
2. Understand how pharmacological models of drug effect can assist the clinician to improve the induction, maintenance and recovery of anesthesia according to the available evidence.
3. Learn about practical solutions to apply the theoretical concepts into daily clinical practice.

Practice Gaps Workshop

- For commonly used anesthetic drugs, there are useful pharmacokinetic-dynamic models available that relate a dose to several desired effects. However, it remains a challenge to apply the provided evidence in practice.
- Target controlled infusion pumps that titrate towards effect-site concentration are currently not available for clinical use in the USA. Alternative solutions to cope with this limitation are less well known.
- It is not common knowledge how a prediction of anesthetic effect derived from a population can be made valuable for individual patients also.

Satisfactory Completion: Learners must complete an evaluation form to receive a certificate of completion. Your chosen sessions must be attended in their entirety. Partial credit of individual sessions is not available. If you are seeking continuing education credit for a specialty not listed below, it is your responsibility to contact your licensing/certification board to determine course eligibility for your licensing/certification requirement.

Physicians: In support of improving patient care, this activity has been planned and implemented by Amedco LLC and the International Society of Anaesthetic Pharmacology (ISAP). Amedco LLC is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

Credit Designation Statement: Amedco LLC designates this live activity for a maximum of 7.25 *AMA PRA Category 1 Credits*[™]. Learners should claim only the credit commensurate with the extent of their participation in the activity.

Program Target Audience: This program is designed for an international audience of general anesthesiologists, and anesthesiologists with a special interest in clinical pharmacology and technology.

Objectives of the Program: After attending this interactive workshop you should be able to:

1. Understand the uses and potential benefits of using depth of anesthesia monitors on patient outcomes post-surgery
2. Discuss the pros/cons of using opioids as part of a balanced anesthetic
3. Understand how the use of or omission of opioids impacts patient recovery
4. Describe the causes of post-operative delirium and understand which medications may potentiate this outcome

Practice Gaps Program

- Enhanced recovery after surgery guidelines have included opioid-sparing techniques. A better understanding of how opioid minimization benefits patient recovery, if at all, is prudent.
- Improved anesthetic outcomes may be achieved through depth of anesthesia monitoring.
- A better understanding of how to identify patients at risk for post-operative delirium and the effects of anesthesia on post-operative delirium is necessary.
- Avoidance of specific medications may be justified for patients at risk for post-operative delirium.
